SUMMARY

Software Engineer with production experience building **Go microservices** at scale (**250K+ messages/day**) on **gRPC, Kubernetes, Redis, and RabbitMQ**. Strong in backend and distributed systems, with hands-on experience integrating **LLMs (OpenAI, Gemini)** into production products.

SKILLS

- **Languages** – Go, JavaScript, C++, SQL
- **Backend & Systems** – Gin, gRPC, REST APIs, Node.js, Express.js, RabbitMQ, Microservices, System Design
- **Databases** – MongoDB, MySQL, Redis
- **DevOps & Cloud** – Docker, Kubernetes, Helm, GCP (GKE, Artifact Registry), CI/CD, GitHub Actions, ArgoCD, Git

EXPERIENCE

Software Engineer at Grexa AI Jan 2026 – Present

SDE Intern to Full-Time (promoted)

- Shipped **190+ merged PRs** across **8 Go microservices** (chat-agent, CRM, comms, GBP) on a B2B WhatsApp AI platform built on **gRPC, MongoDB, Redis, RabbitMQ and Kubernetes**.
- Led a **10k+ LOC refactor** of the chat-agent and GBP services, adding unit-test suites for HTTP handlers, workers and cronjobs on a shared **mockery** setup.
- Built core AI-conversation features on the chat-agent service (**250K+ messages/day**) – WhatsApp template generation, conversation query APIs, human-in-the-loop notifications, pre-signed-URL media and interactive forms – integrating **OpenAI and Gemini** with versioned prompts and tool calling.
- Cut redundant cross-service RPCs via **Redis caching with event-driven invalidation** for org config, locations and knowledge base, backed by MongoDB indexing on hot conversation queries.

Backend Intern at VOAT Network Jul 2025 – Oct 2025

- Architected and shipped core **Node.js/Express** REST APIs for the company platform, designed to handle **1k+ concurrent users**.
- Optimized API queries and response payloads, cutting server response time by **15%** and improving page load speed by **10%**.

PROJECTS

LogSense - AI Log Intelligence Platform

- Building an **AI-powered log analytics platform** that ingests application logs to detect anomalies, surface root cause, and suggest command- and code-level fixes – an AI debugging teammate on top of observability.
- Architected the backend as **Go (Gin) microservices** (split API + async workers) with **JWT auth, MongoDB, Redis, and RabbitMQ**, deployed on **Kubernetes** via **Helm**, plus reusable infra wrappers and structured **Zap** logging.

Quip - A Collaborative Study Platform

- Built real-time group video calls with **WebRTC** for up to **50 participants**, plus an interactive whiteboard for collaborative learning.
- Added **study session tracking**, goal-setting, and gamification to drive accountability and engagement.

A.R.Y.A. - AI Routine & Yield Assistant

- Built an **AI assistant** (**Go/Gin + Flutter**) with an **NLP capture** endpoint classifying free text into finance, nutrition, and diary logs via **OpenAI GPT-4o-mini**.
- Shipped a **degradation-tolerant** service over **MongoDB, Redis, RabbitMQ** on a **GitOps pipeline** (**GitHub Actions to Artifact Registry to GKE**), with schedulers for briefings and **FCM** nudges.

EDUCATION

Jaypee Institute of Information Technology Noida, IN

B.Tech, Computer Science (2026) – CGPA: 8.1/10

D.S. Science Academy Rajasthan, IN

Senior Secondary (PCM): 99.6%

ACHIEVEMENTS AND CERTIFICATIONS

- **Core Team Member** – Google Developer Student Club, JIIT.
- **2nd place**, Hacki'n Winter – Intra-College Hackathon organised by GDSC.
- Orchestrated **Hackstreet 2.0** Hackathon with **100+ teams** and **500+ applications**.
